

Change Log 4/8/2020

5.27.0.2

New Features & Integrations

- Added new reconciliation report capabilities for Storage Commander Pay

5.27.0.1

Bug Fixes

- Fixed issue where First American credentials wouldn't load correctly with multiple processors.

New Features & Integrations

- OneLocal integration is live for text messaging.
- The Pending Documents window will now check for late & auction notices against contracts that have a \$0.00 balance. Once completed it will prompt the user to remove those notices from the queue. It will also check all pending notices to see if the contract is inactive. It will also prompt if any are found and can be removed. If the window is closed it will generate a prompt warning that it is still checking the documents.
- When migrating credit card processors, Storage Commander will now warn the user when they attempt to charge a card on file for the old processor.
- Processor selection has been removed from the autopay window. It will automatically choose the appropriate processor if a facility processes through more than one merchant.
- Added a prompt for reservations notifying the user that the Do Not Rent list is still being checked against the information at all facilities when the Finish button is clicked. The user can wait until processing is completed or disregard the warning and process the reservation anyways.
